DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to extending access to a device in a piconet by an external device residing outside the piconet, classified in class 370, subclass 401.
- II. Claims 6-23, drawn to discovering a desired service by a device in a piconet via a proxy-bridge device, classified in class 709, subclass 229.
- III. Claims 24-33, drawn to managing packet transmission, classified in class 370, subclass 278.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the extending access, discovering services, and managing packet transmission can operate standalone.

Art Unit: 2662

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II and Group III, restriction for examination purposes as indicated is proper.
